

Social network analysis

Hector Marina

- A **social network** can be constructed from relational data and can be defined as a set of social entities, such as people, groups, and organizations, with some relationships or interactions between them. These networks are usually modelled by graphs, where vertices represent the social entities and edges represent the relationships established between them

(Tabassum et al., 2018)

What is SNA?

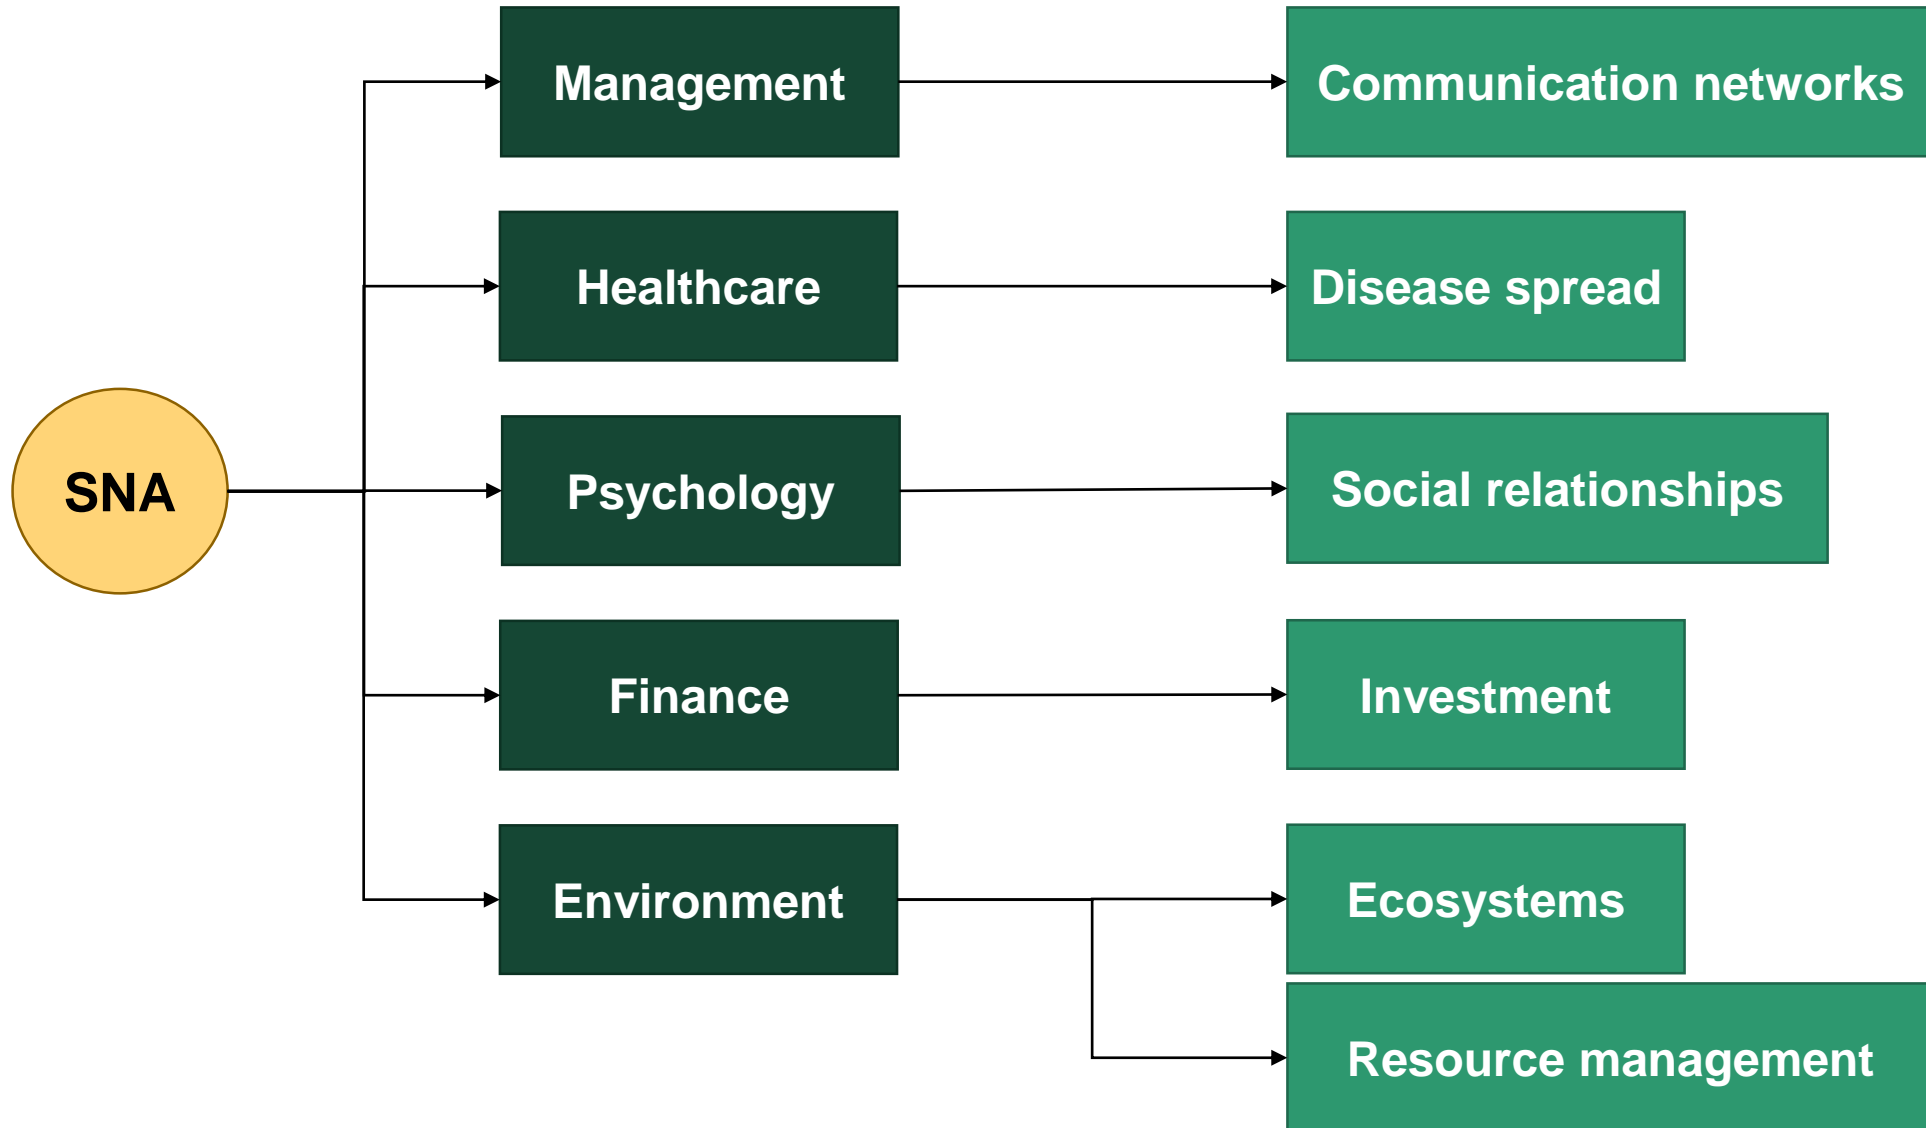

- **Social network analysis** studies structures of relationships linking individuals and interdependencies in behaviour or attitudes related to configurations of social relations

(Freslon et al., 2019)

SNA applications

SNA applications in animals

(Rocha et al., 2020)

(Chen et al., 2015)

(Martínez-López et al., 2009)

(Freslon et al., 2019)

Part of the networks

Ways to represent networks

Adjacency matrix

	a	b	c	d
a	0	1	0	1
b	0	0	0	1
c	1	0	0	1
d	1	0	0	0

Graph

Notation

$$G = \{(a, b), (a, d), (b, d), (c, a), (c, d), (d, a)\}$$

Ways to represent networks

A	B
A	C
A	D
A	E
A	F
E	F
F	G

	A	B	C	D	E	F	G
A	0	1	1	1	1	1	0
B	1	0	0	0	0	0	0
C	1	0	0	0	0	0	0
D	1	0	0	0	0	0	0
E	1	0	0	0	0	1	0
F	1	0	0	0	1	0	1
G	0	0	0	0	0	1	0

igraph

Ways to analyze the information

individual- level models

focuses on an **individual-level outcome**, **network data** are used to define **explanatory variables**

relational-level models

focuses on an **dyad-level**, analyse the **relationship** rather than a characteristic of particular individuals

Network dimensions

Unidimensional
data

Multidimensional
data

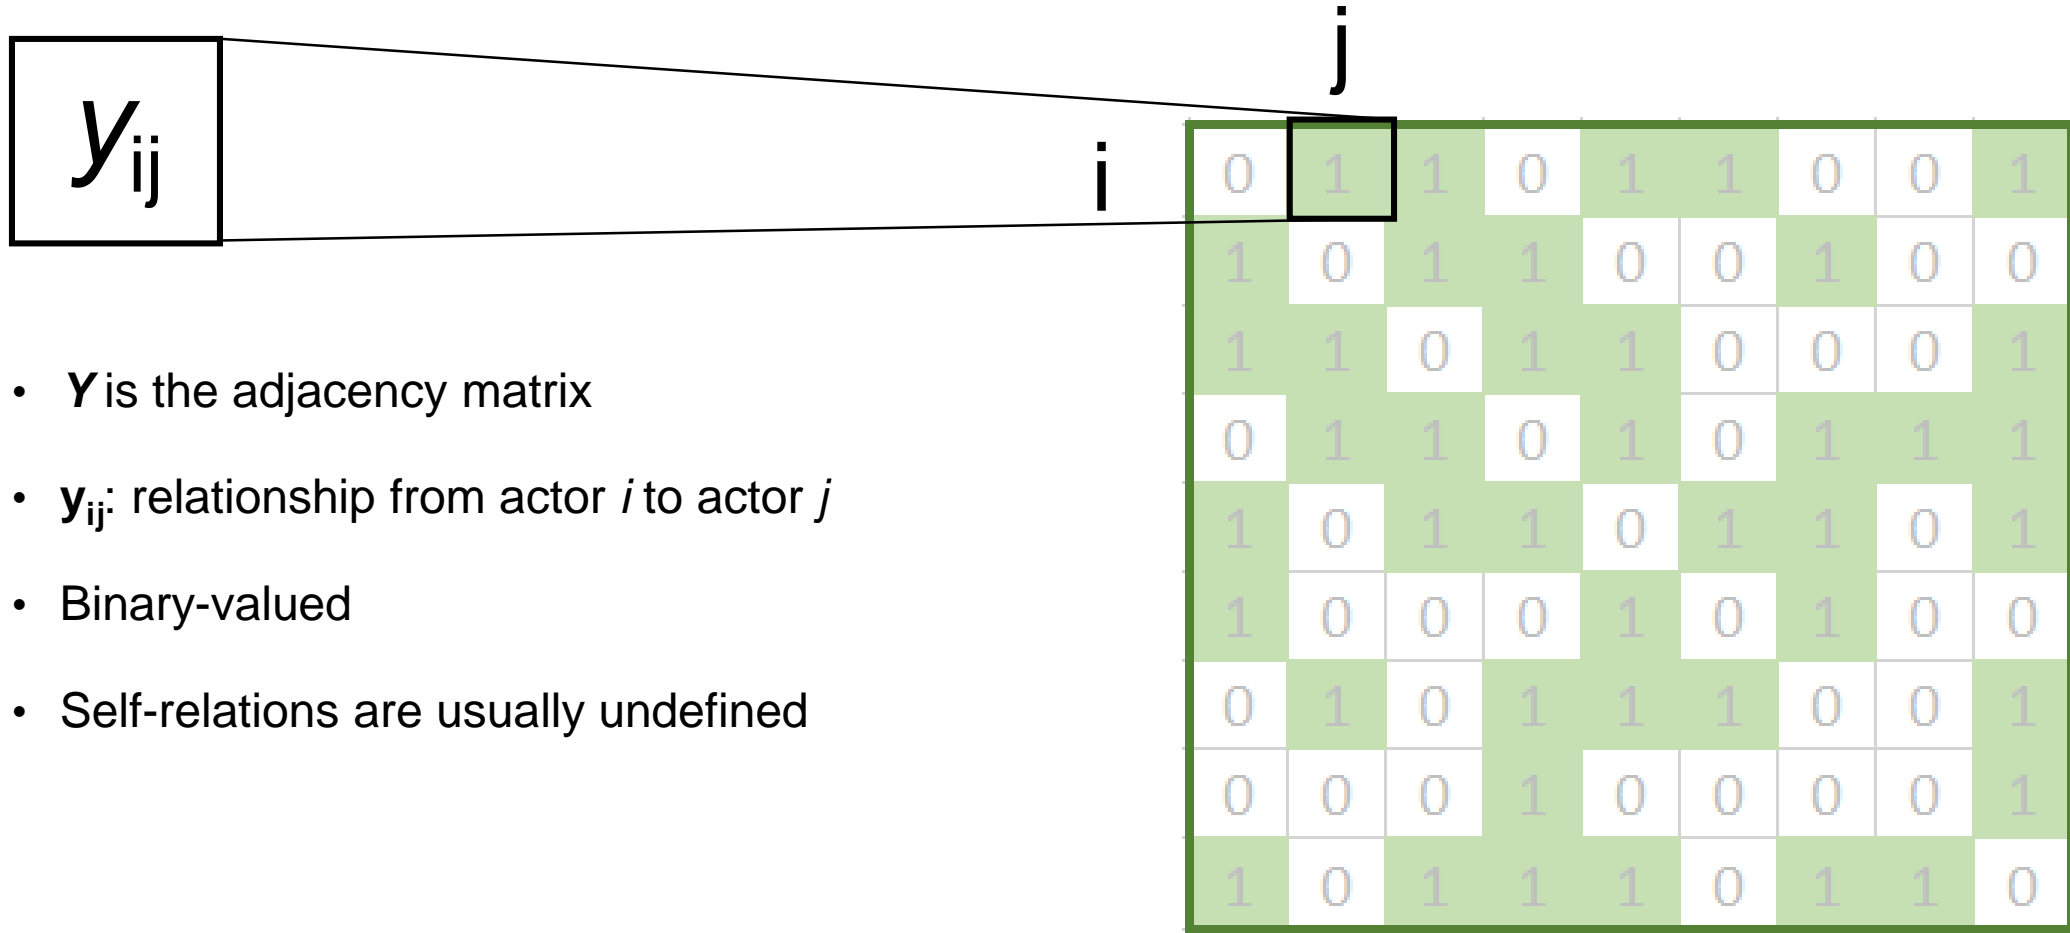

Longitudinal data

Time

Descriptive properties of networks

- Y is the adjacency matrix
- y_{ij} : relationship from actor i to actor j
- Binary-valued
- Self-relations are usually undefined

Descriptive properties of networks

1) Size and density of the network

$$(L = \sum_{i,j} y_{ij})$$

$$L/(N(N - 1))$$

Feeding area

2) Degree and the degree distribution

Descriptive properties of networks

3) Geodesic distance:

Diameter

2

1.5

Descriptive properties of networks

4) Centrality parameters:

Degree:

- The simplest is based on an actor's degree
- Reflects an actor's level of network activity or involvement

Descriptive properties of networks

4) Centrality parameters:

Betweenness:

- Number of times a node acts as a bridge along the shortest path between two other nodes

Shortest path from s->t
that cross through v

$$g(v) = \sum_{s \neq v \neq t} \frac{\sigma_{st}(v)}{\sigma_{st}}$$

Shortest path from s->t

Descriptive properties of networks

4) Centrality parameters:

Closeness:

- Sum of the length of the shortest paths between the node and all other nodes in the graph

$$C(v) = \frac{N - 1}{\sum_u d(u, v)}$$

← Number of nodes in the graph
 ← Distance between vertices u and v

Descriptive properties of networks

4) Centrality parameters:

Eigenvector:

- Principal eigenvector using the adjacency matrix
- Measures a node's importance while giving consideration to the importance of its neighbors

Descriptive properties of networks

5) Homophily:

- Represents the propensity of individuals to interact with others of similar characteristics

Homophily

Heterophily

Relational or dyad-level models

- Exponential random graph models (ERGMs):

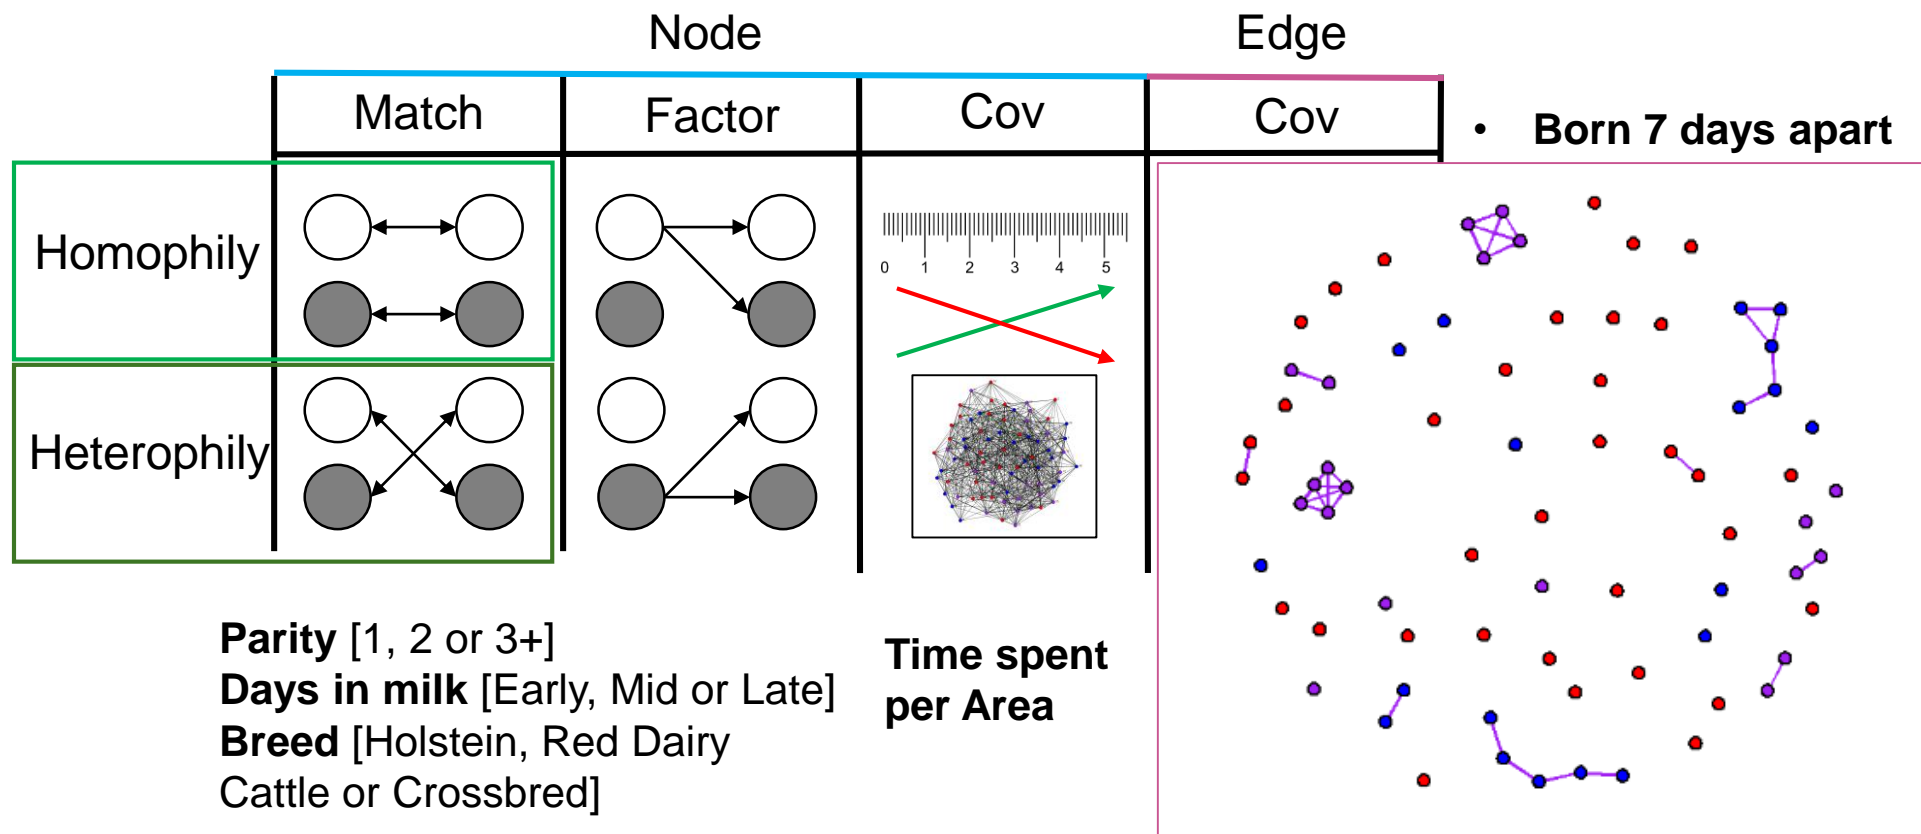

- Y is the adjacency matrix
- y_{ij} : relationship from actor i to actor j
- Binary-valued
- Self-relations are usually undefined

Relational or dyad-level models

- Exponential random graph models (ERGMs):

Relational or dyad-level models

Relational or dyad-level models

- Exponential random graph models (ERGMs):

		Parity		TimeInArea		AGEnet
			Match	Factor		Cov
		$Y_{ij} = 0$	1	0	0	0.22+0.43
		$Y_{ik} = 0$	0	0	1	0.22+0.33
		$Y_{jk} = 1$	0	1	1	0.56+0.33
		$Y_{im} = 1$	1	0	0	0.22+0.13

Parity

-  1
-  2
-  3+

Social interactions

Essential feature of
cattle behavior

Meaningful social
relationships

Ultra-Wide Band technology

- Collecting positions of all cows every second
- Spatial interactions
- Real time information

Spatial interactions

Real-time Location System

Spatial contacts

-  Cow: 1
-  Cow: 2
-  Spatial interaction

Spatial contacts

What was consider as social contact?

Spatial contacts

-  Cow: 1
-  Cow: 2
-  Spatial interaction
